

Running the platform

Control centre, users and roles, payments, commissions, campaigns, support, maintenance and insurance — one guide for every staff role.

WHO THIS IS FOR · Odibrick admins, marketing, support, property managers and partners
VERSION 1.0 · CAMBLISS PVT. LTD.

ILLUSTRATIONS IN THIS GUIDE ARE RENDERED MOCKUPS OF THE INTERFACE,
NOT PHOTOGRAPHS OF A RUNNING SYSTEM.

What is in this guide

- 1 Roles and what each can actually do
- 2 The control centre
- 3 Users, roles and account status
- 4 Recording payments and issuing refunds
- 5 Commission rules and invoicing
- 6 Platform settings
- 7 The audit log
- 8 Marketing: the campaign board
- 9 Support: the ticket queue
- 10 Property managers: inspections and maintenance
- 11 Insurance partners: confirming a policy
- 12 Things the platform deliberately will not let you do

1. Roles and what each can actually do

Twelve roles, twenty-eight permissions. A person can hold several roles and their effective access is the union. What follows is the staff side.

ROLE	CAN DO	CANNOT DO
Super admin	Everything.	Nothing is withheld — which is why this role should be held by as few people as possible.
Admin	Users, KYC, moderation, payments, commissions, marketing, maintenance, insurance, disputes, support, settings, audit, analytics.	Draft or approve agreements. Legal work belongs to the legal team.
Legal team	Cases, drafting, approval, disputes, read any document.	Touch payments, users or settings.
Verification team	KYC review, listing moderation, private property data.	Anything financial or legal.
Marketing	Packages, campaigns, analytics.	See users, payments or properties. Selling reach does not require the ledger.
Property manager	Inspections, maintenance, private property data.	Payments, users, legal.
Support	Tickets, read users, read payments.	Change anything financial or approve anything.
Insurance partner	Confirm a policy they issued.	Everything else. One permission, deliberately.

IMPORTANT
An admin cannot draft or approve an agreement. This is not an oversight — it is the separation the whole legal guarantee rests on. If an admin needs legal access, they need the legal role granted explicitly and audited, not a workaround.

THE ADMIN CONTROL CENTRE

WORTH KNOWING

Nothing on this page is a placeholder or a projection. Every number is a query against the live database. If a figure looks wrong, it is either genuinely wrong in the data or the query needs fixing — it is not a demo value someone forgot to remove.

What to watch

SIGNAL	WHAT IT USUALLY MEANS
Awaiting verification climbing	The verification team is under-resourced. Users are blocked in the meantime.
View-to-tenancy falling	Look at where the funnel narrows before assuming it is a traffic problem.
Commission revenue flat while tenancies rise	Commissions are being scheduled but not invoiced. Check the commission queue.
One city dominating	Fine early on. Worth knowing before you plan spend.

3. Users, roles and account status

Skyline Realty	Agent	Verified	34	Active

USER MANAGEMENT

Changing account status

Suspending an account revokes every outstanding session immediately, so the user is signed out everywhere. It is a real consequence for a real person

— record a reason, and prefer a support conversation first where one is possible.

Granting roles

Roles are granted individually and every grant is audited. Two constraints are enforced:

- Only a super admin can grant the super admin role.
- Nobody can change their own account status.

IMPORTANT
Give one person one account. Every action in the platform is audited against an actor, and a shared login destroys that entirely — a shared admin account means no audit log worth having.

4. Recording payments and refunds

With the default non-custodial provider, money moves directly between the parties and an operator confirms the credit. This is the most consequential routine action in the platform, so it has guardrails.

Record payment received

RECORDING AN OFF-PLATFORM PAYMENT

- 1

Match the credit against the bank statement first
Amount, date and reference. Do not record from a screenshot the payer sent you — a screenshot is not a bank statement.
- 2

Enter the real bank reference
The system requires one and will refuse without it. That reference is what makes the record defensible a year later.
- 3

Record it
The payment is marked paid, both parties are notified, the receipt is generated, and the action is audited with your name on it.

IMPORTANT

Marking a payment paid that did not arrive is, in effect, telling a landlord they have been paid when they have not. The bank reference requirement exists to make that mistake hard, not to slow you down.

Refunds

Under the non-custodial provider, you send the money by bank transfer and then record it with its reference. The ledger shows a refund transaction against the original payment, and a partial refund is recorded as such rather than overwriting the original amount.

5. Commission rules and invoicing

Commissions are generated automatically when a tenancy starts, one row per tenancy year, sitting at **Scheduled** until someone invoices them.

Commissions

TENANCY	CYCLE	BASE	COMMISSION	STATUS
Gachibowli 2 BHK	2026	₹28,000	₹23,800 + GST	Scheduled
Kokapet 3 BHK	2026	₹52,000	₹44,200 + GST	Invoiced
Kondapur 2 BHK	2026	₹26,000	₹13,000 + GST	Paid

Invoice selected

THE COMMISSION QUEUE

Editing rules

Rules carry a date range and an optional city. A city-specific rule wins over the general one. To change pricing, add a new rule with a future effective date and close the old one — do not edit a rule that is already in force.

NOTE

Changing a rule never reprices an existing tenancy. Whatever rule applied when a tenancy started governs it for its whole life. This is deliberate and it is the behaviour you want to be able to explain to an owner.

6. Platform settings

SETTING GROUP	CONTAINS	CARE NEEDED
Brand	Name, promise	Low
Commission	Default rule, grace days	Medium — affects new tenancies
Payments	Provider, settlement mode	High. Switching to a gateway needs a merchant account and a webhook secret in place first
Listing	Free unlimited flag, auto-publish	High. Auto-publish bypasses human verification and should stay off
Search	Default city, launch cities	Low
Tax	GST rate	Medium — affects invoicing

IMPORTANT

`listing.auto_publish` exists as a setting but turning it on removes the human check that gives a verification badge its meaning. If somebody proposes enabling it to clear a queue backlog, the answer is more reviewers, not fewer checks.

7. The audit log

Every consequential action is recorded: verification decisions, drafts, approvals, signatures, payment recording, refunds, role grants, settings changes, dispute updates. Each entry has an actor, a role, an object, an IP address and a timestamp.

Audit log

WHEN	ACTOR	ACTION	OBJECT
20 Aug 14:02	Operations Desk	payment.recorded_offline	payment #412
20 Aug 11:47	Adv. S. Menon	agreement.approved	agreement #118
20 Aug 09:15	Verification Desk	property.verified	property #204
19 Aug 16:30	Odibrick Admin	user.role_granted	user #88

THE AUDIT LOG

Filter by actor, action prefix or object type. When a user disputes something that happened, this is where the answer is, and it is the first place to look rather than the last.

NOTE

The application database user has no delete grant on the audit table, and financial and legal records are never hard-deleted. The log and the data it describes stay in agreement by construction.

8. Marketing: the campaign board

Campaign board

Tech corridor rentals · Skyline Realty
Growth package · ₹24,999 · order PAID
Budget ₹15,000 · spent ₹6,420 · 62,180 impressions · 43 leads
6 properties linked · runs 05 Aug — 04 Sep
LIVE · MANAGER: CAMBLISS CAMPAIGNS

Meridian Heights launch · Meridian Developers
Builder Enterprise · custom quote · order REQUESTED
Awaiting scoped proposal
REQUESTED

THE CAMBLISS CAMPAIGN BOARD

Moving a campaign through production

Requested → Approved → In production → Scheduled → Live → Completed. Two behaviours are enforced rather than left to discipline:

- **A campaign cannot go Live until its order is Paid.** The transition is blocked. Do not work around this by marking an order paid without a payment behind it.
- **Featured placement follows the campaign automatically.** Going live sets the promoted flag on linked properties; pausing or completing clears it. Nobody keeps a slot they are no longer paying for.

Reporting performance

Impressions, clicks, spend and leads are entered from the ad platforms. Where a figure has not been reported, leave it empty — the client dashboard shows nothing rather than an estimate, which is the honest presentation and the one you can defend.

9. Support: the ticket queue

Tickets are ordered urgent first, then by age. You can read the requester's account and their payments, which covers most of what a ticket needs.

Mark resolved

WORKING A SUPPORT TICKET

SITUATION	ROUTE IT TO
Identity or listing verification	The verification team, via the queue
Anything about agreement wording	The legal team. Do not interpret a clause yourself
A payment that has not been recorded	An admin with payment.manage
A dispute between owner and tenant	The dispute process, not a ticket reply
A platform bug	Capture the trace ID from the error and escalate

10. Property managers: inspections and maintenance

Property managers can create inspections and manage maintenance across properties, and can see private property data. They cannot touch payments, users or legal.

Periodic inspections

Same wizard as the Day 1 report, with the kind set to Periodic or Maintenance. Room by room, photograph what matters, submit. The report joins the property's record permanently.

Working maintenance requests

PRIORITY	RESPONSE EXPECTATION
Emergency	Same day. Something is actively causing damage.
High	Within 48 hours.
Normal	Within a week.
Low	Scheduled with other work.

Record the cost bearer honestly — owner, tenant, shared, Odibrick, or undecided. *Undecided* is a legitimate state while responsibility is being worked out, and it is better than guessing.

11. Insurance partners: confirming a policy

An insurance partner account holds exactly one permission: confirming a policy the partner has issued. It cannot see users, tenancies or payments.

Confirm policy

Tenant contents cover · request #44

Holder: Priya Sharma · sum insured ₹3,00,000

Policy number

TC/2026/889201

Starts on

15 Jun 2026

Expires on

14 Jun 2027

Confirm and activate cover

A PARTNER CONFIRMING AN ISSUED POLICY

IMPORTANT

Odibrick does not issue insurance. A policy becomes Active only when a partner enters the policy number the insurer actually issued. Until then the platform tells the customer plainly that cover is not in force. The catalogue also separates INSURANCE_POLICY products, underwritten by a licensed insurer, from ODIBRICK_SERVICE products, which are platform services that pay no claims — never let a customer conversation blur those.

12. What the platform will not let you do

IT REFUSES	WHY
Mark a payment paid without a bank or provider reference	A payment record without a reference is an assertion, not evidence.
Set a campaign live on an unpaid order	Featured placement is a paid product. Extending informal credit through the UI is not available.
Grant super admin unless you are one	Privilege escalation control.
Change your own account status	Self-suspension and self-reinstatement.

Approve an agreement as an admin	Legal approval belongs to the legal team, and the permission is not granted to admins.
Activate an insurance policy without a policy number	Odibrick is not the insurer and cannot put cover in force.
Delete an audit entry	The application database user has no delete grant on that table.

Each of these is enforced in the service layer, not the interface. Hiding a button would not be enforcement, and an API call that tries to go around one gets the same refusal.

Where to get help

Platform bugs go through a ticket with the trace ID attached. Anything involving money, legal wording or a user's account status is worth a second opinion before you act — the actions in this guide are the consequential ones, and every one of them carries your name in the audit log.
