

Cases, drafting and approval

The case queue, the clause library, the consultation, and the two rules the system will not let you break.

WHO THIS IS FOR • Qualified legal professionals working on the Odibrick platform
VERSION 1.0 • CAMBLISS PVT. LTD.

ILLUSTRATIONS IN THIS GUIDE ARE RENDERED MOCKUPS OF THE INTERFACE,
NOT PHOTOGRAPHS OF A RUNNING SYSTEM.

What is in this guide

- 1 Your responsibility, and the system's
- 2 The two rules enforced in code
- 3 The case queue
- 4 Opening a case
- 5 The clause library
- 6 Drafting an agreement
- 7 Scheduling and running the consultation
- 8 Approving a version
- 9 Signature and execution
- 10 Disputes
- 11 What the platform will not do

1. Your responsibility, and the system's

Odibrick's central promise to users is that a qualified person reads the agreement before anybody signs it. You are that person. The platform's job is to make it impossible for that step to be skipped, bypassed or quietly invalidated by a later edit. Everything else in this guide follows from that division.

THE PLATFORM GUARANTEES	YOU SUPPLY
A draft cannot reach a signature without an explicit approval.	The professional judgement in the draft itself.
An approval is bound to one exact version and is cancelled by any redraft.	Reading the version you are approving.
Every draft, approval and signature is audited with actor and timestamp.	Advice to both parties on the consultation.
Use of a generation aid is recorded as a fact on the version.	Never treating that aid as a substitute for review.

IMPORTANT

The platform does not give legal advice and neither does any automated part of it. There is no clause suggestion that auto-applies, no risk score, and no automated dispute outcome anywhere in the system. Where a drafting aid is used, the version records `drafted_with_ai` as a fact for the audit trail — it is a disclosure, not an endorsement.

2. The two rules enforced in code

Rule one: an unapproved draft cannot be signed

If an agreement has no recorded approval, the sign endpoint refuses it outright. Neither party can sign their way past a missing review, and no interface anywhere exposes a route around it.

Rule two: an approval belongs to one version

When you approve, you approve a specific version number. If the draft is changed afterwards, the approval is cleared automatically and the agreement returns to review. Equally, if you open a draft, someone redrafts it while you are reading, and you then approve — the system refuses, because the version you reviewed is no longer the current one.

WORTH KNOWING

These two rules together close the gap that matters: a document that was reviewed cannot be edited into something that was not, and then signed. You do not have to police this manually.

3. The case queue

ODB-LGL-2026-000117 · 3 BHK villa in Kokapet

Kokapet, Hyderabad · S. Iyer ↔ A. Nair

New agreement · Rent ₹52,000 · Protected plan

Opened 5 days ago · Assigned to Adv. Shalini Menon

DRAFTING · AGREEMENT AWAITING APPROVAL

THE LEGAL CASE QUEUE

How the queue is ordered

Urgent first, then high, then normal, then low — and within each band, oldest first. A case that has been sitting for a week rises above one opened this morning at the same priority.

STATUS	MEANS
Intake	Case just opened by an accepted application. Nobody assigned.
Document review	Assigned. Reading the KYC and property documents.
Consultation scheduled	A video session is booked with both parties.
Drafting	A version exists and is being worked on.
Approved	A version has been approved and is out for signature.
Executed	All parties have signed. Case closed.

4. Opening a case

- 1

Assign it to yourself

From the case, choose **Assign** and set a priority. An unassigned case is nobody's responsibility, which is how cases go stale.
- 2

Read the documents before anything else

The case detail brings together everything in one view: the tenancy terms, both parties' KYC status, the property record and every document attached to either. Read these before you draft a line.
- 3

Check both parties are actually verified

The KYC panel shows each party's status. Drafting an agreement between parties whose identities have not been confirmed defeats the purpose of the platform.
- 4

Note the jurisdiction

Set on the case. Stamp duty, registration requirements and the enforceability of specific clauses are state-specific. The clause library is tagged by jurisdiction for this reason.

Case detail

CASE SUMMARY	
PROPERTY	2 BHK apartment, Gachibowli
OWNER	R. Reddy — KYC verified 04 Jun
TENANT	Priya Sharma — KYC verified 12 Jun
RENT / DEPOSIT	₹28,000 / ₹1,12,000
LOCK-IN / NOTICE	6 months / 60 days
SERVICE PLAN	Protected
JURISDICTION	Telangana

Schedule consultation

Add internal note

A CASE IN DOCUMENT REVIEW

NOTE

Internal notes are visible only to the legal team. Notes marked *Parties* are visible to the owner and tenant. Choose deliberately — the distinction is enforced, but only you know which one a given note should be.

5. The clause library

The library holds reviewed, versioned, jurisdiction-tagged clause templates with placeholders that are filled from the tenancy's actual numbers. Mandatory clauses are flagged and appear first.

Clause library

MANDATORY

PAYMENT

TERMINATION

MAINTENANCE

USE

Rent and payment terms · mandatory · v2 · Telangana

The Licensee shall pay a monthly licence fee of INR {{rent_amount}} on or before the {{rent_due_day}} day of each calendar month...

Security deposit and refund · mandatory · v2

A refundable deposit of INR {{deposit_amount}} shall be returned within {{refund_days}} days of the Licensee vacating...

THE CLAUSE LIBRARY

Working with placeholders

Placeholders in double braces are substituted at draft time from the tenancy record — rent, deposit, maintenance, lock-in, notice, rent due day. You can override any of them, and you can add variables of your own. A placeholder with no matching value is left visible in the output rather than silently rendering as blank, so an unfilled variable is obvious on review.

Adding a custom clause

You can add clauses that are not in the library for a specific agreement; they are marked as custom on the version. If you find yourself writing the same custom clause repeatedly, it belongs in the library — raise it so it can be reviewed and versioned properly.

6. Drafting an agreement

- 1

Start the draft from the case

The first draft creates the agreement record, assigns it a number and registers both parties as signatories in signing order.
- 2

Select clauses and set the variables

Mandatory clauses first, then whatever the consultation produced. Variables default from the tenancy but you can override them.
- 3

Write a change summary

Optional on version one, valuable on every version after. Six months later, the summary is how anyone reconstructs why the deposit clause changed.
- 4

Disclose a drafting aid if you used one

The `drafted_with_ai` flag is recorded on the version. It changes nothing about your obligation to review, and it costs nothing to set honestly.

NOTE

Every redraft increments the version and clears any existing approval. The agreement returns to **Legal review**. This is not a bug to work around — it is the mechanism that makes approval meaningful.

What you cannot redraft

An agreement that is already out for signature cannot be redrafted. Cancel it first. This prevents the situation where one party has signed a document and the other signs a different one.

7. The consultation

Scheduling a consultation moves the case to **Consultation scheduled** and the tenancy to **Consultation**, and notifies both parties.

Schedule a consultation

Purpose

Legal consultation

Duration

30 minutes

Scheduled for

18 Jun 2026, 4:00 PM

Agenda

Walk both parties through deposit, lock-in, notice and repairs.

Schedule and notify parties

SCHEDULING A CONSULTATION

What to cover

- The deposit: amount, and the refund window in days.
- Lock-in and notice, and what happens if either party breaks them.
- Who bears which repair costs, with a workable boundary rather than a vague one.
- Rent escalation on renewal, if any.
- What happens if the property is sold during the tenancy.
- The condition report: explain that it exists and why it protects both of them.

- 1

Record the outcome

After the call, use **Complete meeting** and write the outcome notes. This is the record of what was agreed, and it is what the draft is then written against.
- 2

Draft to match what was agreed

If the parties settled on a thirty-day refund window, the clause says thirty days. A draft that quietly differs from the call is the fastest way to lose both parties' trust in the process.

IMPORTANT

You are advising both parties at once, and you are not either party's personal counsel. Say so on the call. Where one side's interests would be better served by independent advice — an unusual lock-in, a corporate counterparty, a high-value deposit — tell them that plainly.

8. Approving a version

ODB-AGR-2026-000001 · VERSION 2

Leave and Licence Agreement

LEGAL REVIEW

Change summary (version 2)

Refund window reduced from 45 to 30 days per consultation on 18 Jun.
Maintenance responsibility clause split between structural and consumable.

VERSION	
DRAFTED BY	Adv. Shalini Menon
DRAFTED WITH AN AID	No
CURRENT VERSION	2
APPROVAL STATUS	Not approved

Approve version 2

Redraft

A VERSION AWAITING APPROVAL

Approving sets the agreement to **Awaiting signatures**, records you as the approver with a timestamp, and notifies both parties that there is something to sign.

NOTE

If the approve action is refused with a message about the draft having changed, that is rule two working. Someone redrafted while you had it open. Reload, read the new version, and approve that.

Separation of duties

Drafting and approval are separate permissions precisely so they can be held by different people. In production they should be. One person drafting and approving their own work is permitted by the system but is not what the permission split is for.

9. Signature and execution

Parties sign in order. The agreement moves to **Partially signed** after the first signature and **Executed** only when the last one lands. Each signature records a timestamp, an IP address and the consent text the party accepted.

On execution, the platform automatically: closes the legal case, moves the tenancy to **Awaiting payment**, raises the deposit and first month on the ledger, writes the event to the property timeline, and notifies both parties.

IMPORTANT

With no e-signature provider configured, a signature is recorded as a click-wrap consent with timestamp and IP. The agreement page states this plainly rather than implying a qualified digital signature. If your deployment requires more, that is a provider integration, not a UI change.

10. Disputes

The legal team holds the dispute management permission. A dispute arrives with a category, a claimed amount if any, and whatever evidence the parties have attached — condition reports, payment records, maintenance tickets, documents.

How to work one

1. Read the record before either party's account of it. The condition reports and the payment ledger are contemporaneous; the submissions are not.
2. Move the status to **Under review** so both parties can see it is being worked.
3. Ask for specific missing evidence rather than a general response.
4. Propose a resolution and record it in full.
5. Close it only when both parties have responded to the proposal.

IMPORTANT

You facilitate; you do not adjudicate. Odibrick has no authority to compel either party, and nothing in the system makes an automated determination. The move-out comparison carries an explicit note that it is a record and not a determination of liability — do not undercut that by presenting a resolution as a ruling. Either party's remedies through the rent authority or the courts are unaffected, and where a matter clearly belongs there, say so.

11. What the platform will not do

IT WILL NOT	BECAUSE
Auto-approve a draft	Approval is an act of professional judgement and is recorded against a named person.
Let a signature onto an unapproved or stale version	Enforced in the service layer, not the interface.
Compute or pay stamp duty	State-specific and outside the platform's scope. The stamping status is tracked; the duty is not paid.
Register an agreement	An executed agreement here is a signed document, not a registered one. The interface says so on the agreement page.
Decide a dispute	No automated outcome exists anywhere in the system.
Give either party personal legal advice	You advise both parties on the document. That is not the same thing, and it is worth saying out loud on the call.

Where to get help

Platform problems go through a support ticket. Questions of legal substance are for your own professional judgement and your firm's supervision — the platform supports your process, it does not supervise it.
