

Identity and listing verification

You decide what a badge on Odibrick means. This guide is about applying that judgement consistently.

WHO THIS IS FOR · Odibrick verification staff reviewing KYC submissions and listings
VERSION 1.0 · CAMBLISS PVT. LTD.

ILLUSTRATIONS IN THIS GUIDE ARE RENDERED MOCKUPS OF THE INTERFACE,
NOT PHOTOGRAPHS OF A RUNNING SYSTEM.

What is in this guide

- 1 Why this role matters more than it looks
- 2 The identity queue
- 3 Reviewing an identity submission
- 4 Approving and rejecting, and how to word it
- 5 The listing moderation queue
- 6 Verifying a property
- 7 Recording individual checks
- 8 Fraud signals
- 9 Handling data properly
- 10 Edge cases

1. Why this role matters more than it looks

A renter filters for *Documents verified* and sees eleven listings instead of forty. They then treat those eleven as safe. That inference is only sound if the badge means what it claims — and the badge means whatever your team decides it means, applied one submission at a time.

The system supports you in two specific ways.

DESIGN DECISION	WHAT IT DOES FOR YOU
A badge is a database row, not a flag	There is no boolean <code>is_verified</code> anyone can set optimistically. A seal exists only where a verification record says VERIFIED, with your name and a timestamp on it.
Missing checks are shown honestly	A property page says which checks were <i>not</i> done rather than leaving a gap the reader might mistake for approval. You never have to approve something marginal to avoid an ambiguous display.
Rejections require a reason	The system will not accept a rejection without one. This is a feature — it forces the reason to exist and be communicable.
Every decision is audited	Actor, timestamp, IP and object. If a decision is ever questioned, the record shows who made it and when.

WORTH KNOWING

You are not judging whether someone seems trustworthy. You are confirming a narrow, checkable fact: does this document match this name, does this paperwork describe this property. Keep the question narrow and the decisions stay consistent.

THE IDENTITY REVIEW QUEUE

The queue is ordered oldest first. People are blocked from applying or listing until you have decided, so age in the queue is real friction for a real person.

3. Reviewing an identity submission

1

Open the submission and the document

You see the declared legal name, the document type, the last four digits of the number, and a link to the uploaded scan in the vault.

2

Check the name against the document, character by character

This is the whole job. *Priya S Sharma* on the document and *Priya Sharma* on the form is a mismatch. It is usually innocent, and it is still a mismatch — reject with a clear reason and they will resubmit in a minute.

3

Check the document is legible and complete

All four corners visible, text readable, not cropped, not obscured by glare. A document you cannot read is a document you cannot verify.

4

Check for obvious tampering

Mismatched fonts, misaligned text, inconsistent background texture, a photograph that does not sit naturally in the layout. You are not a forensic examiner — but obvious edits are obvious.

5

Decide

Approve or reject. A rejection needs a reason, and the reason reaches the user.

Priya Sharma

SUBMISSION	
DECLARED LEGAL NAME	Priya Sharma
DOCUMENT TYPE	Aadhaar
DOCUMENT NUMBER	 4821
SUBMITTED	12 Jun 2026, 09:14
ACCOUNT ROLE	Tenant
ACCOUNT CREATED	10 Jun 2026

UPLOADED DOCUMENT — OPENS FROM THE VAULT

- Approve
- Reject
- Request a better scan

AN IDENTITY SUBMISSION UNDER REVIEW

IMPORTANT

The full document number is never shown to you, or to anyone. It is encrypted at rest and only the last four digits are ever displayed. You verify against the scan, not against a stored number — which is the correct way round.

4. Approving and rejecting

Wording a rejection

The reason goes to the user. A specific reason gets a correct resubmission tomorrow; a vague one gets three more wrong attempts and a support ticket.

INSTEAD OF	WRITE
Document rejected	The name on your Aadhaar reads 'Priya S Sharma'. Please resubmit with your name entered exactly as printed.
Unclear image	The bottom-left corner of the scan is cut off. Please upload a photograph showing all four corners of the document.
Invalid document	The uploaded file is a utility bill. Please upload one of: Aadhaar, PAN, passport, driving licence or voter ID.
Try again	The document number entered does not match the number visible on the scan. Please check and resubmit.

When to approve

Approve when the name matches, the document is a valid accepted type, the scan is legible and complete, and nothing about it looks edited. That is the whole test. Do not add conditions of your own — an inconsistent bar is worse than a low one, because nobody can predict it.

When you are unsure

Use **Request a better scan** rather than approving on balance. It keeps the submission open, costs the user two minutes, and avoids you carrying a decision you were not comfortable with.

7 listings awaiting review

2 BHK apartment in Gachibowli

Listed by Ramesh Reddy (Owner) · identity verified 04 Jun

Gachibowli, Hyderabad 500032 · ₹28,000/month · 9 photographs

Submitted 2 days ago · completeness 92%

PENDING VERIFICATION

3 BHK apartment in Kondapur

Listed by Skyline Realty (Agent) · RERA TS/RERA/AG/1004

Kondapur, Hyderabad 500084 · ₹34,000/month · 6 photographs

Submitted 4 days ago · completeness 88%

PENDING VERIFICATION · DUPLICATE ADDRESS FLAG

THE LISTING MODERATION QUEUE

6. Verifying a property

Four checks, each recorded separately. A listing can be published with some checks passed and others not — the property page shows exactly which, so partial verification is an honest outcome rather than a failure.

CHECK	WHAT YOU ARE CONFIRMING	LOOK AT
KYC	The lister's own identity is verified.	Their identity record. This should already be green before they could submit.
Owner identity	The lister is the person entitled to let this property.	The name on the ownership document against the name on their verified ID.
Ownership document	The paperwork describes this property.	Sale deed, property tax receipt, allotment letter or equivalent. Check the address on it against the listing.
Address	The stated address is real and matches.	The ownership document, the PIN code, and whether the photographs are consistent with the described building type.

Checking the photographs

- Do they show the property described? A 2 BHK listing with photographs of a single room is not complete.
- Are they consistent with each other — same flooring, same fittings, same building?
- Do they look like stock photography or estate-agent catalogue images? Reverse image search if something feels too polished.
- Does the exterior shot match the described building type and floor count?

1 Approve or reject the listing

Approving publishes it. Rejecting requires a reason, which reaches the lister.

2 Record each check separately

This is the step that creates the seals. Approving the listing and recording the checks are different actions — a published listing with no recorded checks shows no badges at all, which is correct but rarely what you intended.

Record verification checks

KYC

Lister's identity verified 04 Jun 2026

Owner identity

Name on sale deed matches verified PAN

Ownership document

Sale deed dated 12 Mar 2019, address matches listing

Address

PIN and locality consistent with the deed

Save checks

Approve and publish

RECORDING INDIVIDUAL VERIFICATION CHECKS

IMPORTANT

Record only what you actually checked. If the ownership document was not supplied, leave that check unrecorded — the property page will say the check was not completed, and that sentence is the honest one. Recording a check you did not perform is the single most damaging thing anyone in this role can do.

7. Fraud signals

The platform surfaces three heuristics for a human to look at. None of them is enforced automatically, and none is evidence on its own.

Fraud signals

Duplicate addresses

Plot 42, Sunrise Residency, 500084 — 2 active listings
Properties #118 and #204, different listers

Rapid listing creation

Skyline Realty — 22 listings created in the last 24 hours

Pricing far below the locality average

3 BHK in Jubilee Hills at ₹12,000 · locality average ₹64,000

FRAUD SIGNALS AWAITING HUMAN REVIEW

SIGNAL	INNOCENT EXPLANATION	WORTH CHECKING
Duplicate address	An owner and their agent both listed it, or two units in the same building were entered with the same address line.	Whether both listers can produce ownership paperwork.
Rapid listing creation	A legitimate agency onboarding its book.	Whether the listings have real photographs and distinct addresses.
Price far below locality	A genuinely distressed or unusual property, or a typo — ₹12,000 instead of ₹1,20,000.	Almost always worth one message to the lister before anything else.

NOTE

A signal is a prompt to look, not a verdict. Suspending an account is a serious action with real consequences for someone's livelihood, and it is audited against your name. Ask first.

8. Handling data properly

You have access to other people's identity documents. A few rules follow from that, and they are not negotiable.

- **Every document you open is logged** — who, what, when. This is not surveillance of you; it is the protection users are promised, and it protects you too if an access is ever questioned.
- **Open only what you need.** Browsing documents unrelated to a submission in your queue has no legitimate purpose and leaves a record.
- **Never download, screenshot, photograph or forward a document.** The vault exists so these files stay in one controlled place.
- **Never share a document number** in a ticket, an email or a message. The system deliberately shows you only the last four digits — do not defeat that by transcribing what you can see on the scan.
- **Aadhaar carries specific legal obligations in India.** Treat it with more care than the others, not less.

IMPORTANT

If a colleague asks you to look up someone's document for a reason outside your queue, decline and raise it. That request is either a mistake or something worse, and either way the answer is the same.

9. Edge cases

The name differs only by an initial or a middle name.

Reject with a specific reason. It is a two-minute fix for the user and it keeps the standard consistent. Do not exercise discretion here — an unpredictable bar is worse than a strict one.

The document is valid but the photograph is of a screen.

Request a better scan. A photograph of a monitor showing a document is not a document, and it defeats any tampering check.

An agent is listing a property they do not own.

That is what agent accounts are for. Verify the agent's own identity and their RERA registration. The owner-identity check should reflect what you could actually confirm — if you could not confirm the owner, do not record that check.

A builder is listing units in an unbuilt project.

Legitimate. Check the RERA project registration rather than a sale deed, and confirm the possession date is stated.

The same property appears from an owner and from their agent.

Usually innocent. Contact both, confirm the arrangement, and keep one listing so renters are not enquiring twice about the same flat.

A user resubmits the same rejected document unchanged.

Reject again, and make the reason more concrete than last time. If it happens a third time, raise a support ticket so someone can talk to them.

Someone claims urgency and asks you to fast-track.

The queue is oldest-first for a reason. Genuine urgency goes through your supervisor, not around the queue.

You are related to, or know, the person in a submission.

Do not review it. Hand it to a colleague. Your decision is audited against your name and there is no upside to being the person who approved their cousin's listing.

Where to get help

Ambiguous submissions go to your supervisor before a decision, not after. Platform problems go through a support ticket. When in doubt on an identity document, requesting a better scan is always available and always defensible.
